What Is the POSSE Proof of Concept?

The POSSE Proof of Concept is a structured, time-boxed pilot programme for up to 100 users, designed to generate the evidence and metrics your organisation needs to build a confident, boardroom-ready business case for full deployment.

The POC delivers full POSSE programme access, executive reporting, cyber insurance readiness documentation, and a clear quantified picture of the risk reduction achieved during the pilot — giving your leadership team everything they need to proceed with confidence.

The POC is not a trial. It is a structured programme that delivers real awareness, real risk reduction, and real evidence — from day one.

What the POC Includes

Programme Access • Full POSSE programme for up to 100 users • Individually tailored experience for each participant • Threat-led learning modules aligned to real, current attack vectors • Personal risk dashboard for every user • Monthly threat updates throughout the pilot period	Reporting & Evidence • POC dashboard with full participation and progress analytics • Quantified risk reduction metrics — avoidance assessed, not likelihood estimated • Cyber insurance readiness report — ready to present to your broker at renewal • Executive risk briefing on POC completion • Documented business case for full deployment
---	--

The POC Output: Your Business Case

01	Cyber insurance readiness report — 10–30% premium reduction achievable at renewal (Coalition / Cowbell Cyber / Lloyd’s 2024)
02	Risk reduction metrics — 70% breach likelihood reduction with a mature programme (IBM / Ponemon 2023)
03	Executive risk briefing with board-ready summary and ROI analysis — 37:1 average ROI (Forrester / KnowBe4 2023)
04	ISO 27001, NIS2, GDPR, and Cyber Essentials compliance evidence — audit-ready from day one

Who Should Run a POC?

The POSSE POC is designed for organisations that:

- Want evidenced assurance before committing to a full programme rollout
- Need board or executive sign-off and require a quantified business case
- Are approaching cyber insurance renewal and want premium reduction evidence
- Are undergoing ISO 27001, NIS2, or Cyber Essentials assessment
- Have experienced a recent incident or near-miss and need to demonstrate remedial action
- Want to benchmark their current human-layer security posture before investing further

ISO 27001 | NIST CSF 2.0 | UK & EU GDPR | Cyber Essentials | NIS2 | PCI DSS v4.0 | DORA

The POC pays for itself. One insurance premium reduction cycle typically covers the full annual cost — and leaves you with the evidence base for a far stronger full deployment.
